

Question 3:

Find all pizzerias that serve only pizzas eaten by people over 30

DTD

W3schools.com XML tutorial

`<?xml version="1.0" encoding="ISO-8859-1"?>`

↑ XML Version ↑ encoding used

- XML elements must have a closing tag
- XML tags are case sensitive
- XML elements must be properly nested
- XML documents must have a root element
- XML attributes must be quoted ①
- Use entity references for special chars $< \neq <$
- White Space is preserved in XML
- XML stores new line as LF

① Use attributes for meta data and not much more

Displaying Your XML files with CSS

`<?xml-stylesheet type="text/css" href="cd-catalog.css"?>`

↪ link to CSS file to use

W3C recommends using XSLT to format XML

- Extensible Stylesheet Language Transformations
- more sophisticated than CSS

Declaring Attributes

<!ATTLIST payment type CDATA "check" >

ex: <payment type="check" />

Attribute type possibilities:

<u>Type:</u>	<u>Description</u>
CDATA	The value is character data
(en1/en2/...)	from an enumerated list
ID	unique id
IDREF	id of another element
IDREFS	list of other ids
NMTOKEN	valid XML token
NMTOKENS	valid XML tokens
ENTITY	entity
ENTITIES	list of entities
NOTATION	name of a notation
xml:	predefined XML value

W3schools Intro to DTD

It defines legal building blocks of an XML document.

Defines the document structure with a list of legal elements and attributes.

<!DOCTYPE root-element [element-declarations]>

<?xml version="1.0"?>

<!DOCTYPE note [defines ~~note~~ root element
<!ELEMENT note (to, from, heading, body) > defines child elements of note element

<!ELEMENT to (#PCDATA) > defines element to be of type #PCDATA

<!ELEMENT from (#PCDATA) > "

<!ELEMENT heading (#PCDATA) > "

<!ELEMENT body (#PCDATA) > "

</note>

<to> Tove **</to>**

<from> Sani **</from>**

<heading> Reminder **</heading>**

<body> Don't forget me this weekend **</body>**

</note>

<!DOCTYPE root-element SYSTEM "filename">

DTD defined in external file

Building Blocks of XML Data

From a DTD's perspective, all XML docs are made up of the following building blocks

- Elements
- Attributes
- Entities
- PCDATA
- CDATA

parsed character data → text + between start and end tag
Character data. text will not be parsed
Tags inside the text will not be treated as markup and entities will not be expanded.

Contd

Can't do \rightarrow

Declaring Elements

$\langle !ELEMENT \text{element-name category} \rangle$
or
 $\langle !ELEMENT \text{element-name (element-content)} \rangle$

Empty Elements

$\langle !Element \text{element-name EMPTY} \rangle$

example:

$\langle !ELEMENT \text{br EMPTY} \rangle$

XML element:

$\langle \text{br} / \rangle$

Declaring Minimum One Occurrence of an Element

$\langle !ELEMENT \text{note (message}_+ \rangle$ *element must occur at least once*

Declaring Zero or More Occurrences of an Element

$\langle !ELEMENT \text{note (message}_* \rangle$ *element can occur zero or more times*

Declaring Zero or One Occurrences of an Element

$\langle !ELEMENT \text{note (message}_? \rangle$ *element can occur zero or one time*
